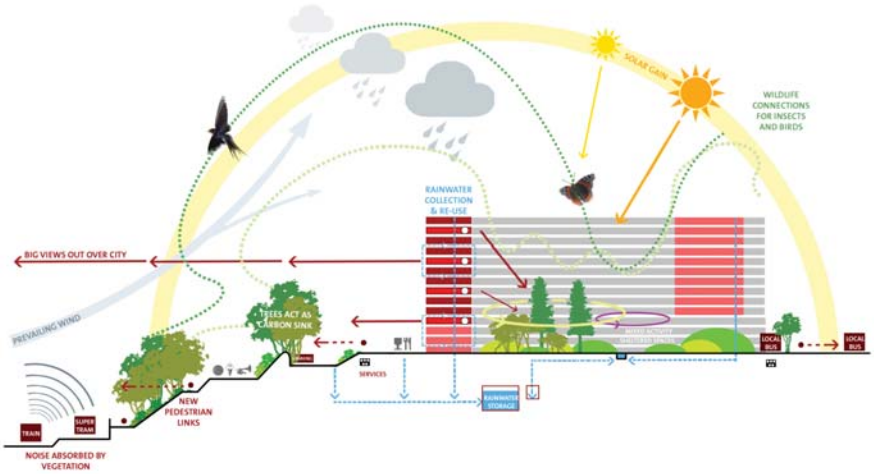
Park Hill
Sheffield UK

In collaboration with Hawkins\Brown and Studio Egret West, a regeneration masterplan was undertaken by Grant Associates to bring life back to the landscape and spaces of Park Hill, a grade II listed housing estate in central Sheffield.

The aim of the project is the creation of a setting that combines beauty and real purpose – a vibrant habitat as attractive to people as it is to birds and other wildlife.

The proposal for the site establishes an approach that will redefine the spaces with a clear function, a richness of colour, and elements of surprise and interest. Small intimate courtyards and gardens populate the upper slopes of the landscape; in the middle slopes communal gardens offer a unique play and relaxation environment; lower down the slope is the opportunity for a major public space. This will be enclosed by new public buildings including a health centre, nursery and community centre, as well as new retail, commercial and leisure facilities.



Site Area: 12.3 Hectares
Client: Urban Splash
Architects: Hawkins\Brown
Studio Egret West
Engineers: Martin Stockley Associates
Overall Project Value: £37.5 million
